

CONTENTS

1. Introduction	7
2. The history of gold mining in Lower Silesia – an overview	10
2.1. Medieval placer gold beneficiation and extraction methods	12
3. Previous studies on the placer gold mineralization in Lower Silesia	14
4. Field and laboratory methods	17
4.1. Sampling and laboratory processing	17
4.2. Analytical methods	18
5. The North Sudetic Basin region	20
5.1. The history of exploration and mining	21
5.2. Geological setting	22
5.3. The Lwówek Śląski district	24
5.4. The Złotoryja district	31
5.4.1. Złotoryja – Kopacz mining centre	31
5.4.2. Nowa Ziemia – Sępów mining centre	36
5.5. Gold characteristics	42
5.6. Discussion of the origin and source of placer gold	48
5.7. Prospective geological environments	54
6. The Dziwiszów historical mining district	55
6.1. Surficial geology	55
6.2. Bedrock geology	58
6.3. Geology of the auriferous sequence	58
6.4. Gold characteristics	61
6.5. Source of gold and other placer minerals	64
7. The Wądroże Wielkie region	66
7.1. The history of exploration and mining	66
7.2. Geological setting	70

7.3. Mineralized veins.	71
7.4. Gold-bearing clastic sediments	73
7.4.1. Eluvial series.	73
7.4.2. Colluvial series	75
7.4.3. The Wierzbak River valley-fill auriferous sequence.	78
7.5. Placer gold characteristics	79
7.5.1. Size, morphology and internal texture of gold.	80
7.5.2. Chemistry of gold.	82
7.6. Genesis of the Wądroże Wielkie placer gold	85
7.6.1. Origin of supergene Au-mineralization	86
7.6.2. Timing of the secondary gold mineralization.	89
7.6.3. Implications of secondary gold mobility	89
7.7. Summary of placer gold mineralization at the Wądroże Wielkie region	90
8. The Eastern Sudetes historical mining district	91
8.1. Geological setting.	91
8.2. Historical placer mining activity.	94
8.3. Technogenous deposits generated by historical gold mining	101
8.4. Distribution, size and morphology of the gold grains	102
8.5. Chemical composition of gold	106
8.6. Evidence of gold remobilization	107
9. Gold-bearing tailings generated by processing plants	109
9.1. Rakowice Plant – geology of the Middle Bóbr River valley	109
9.2. Sędziszów Plant – geology of the Lesk Creek valley.	111
9.3. Heavy mineral concentrations and their characteristics	113
9.4. Content of gold and other heavy minerals in tailings	115
9.5. Gold characteristics	119
9.5.1. Size distribution	119
9.5.2. Grain shape	120
9.5.3. Internal texture	124
9.5.4. Chemistry and probable primary sources of gold	125
9.6. Free gold grains in the separation process	128
9.7. Lost of placer gold in the process of beneficiation	130
10. Supergene mobility of gold – an overview	132
10.1. Bio-mediated Au mobilization in placer environment.	135
11. Models of Ag-depleted rims formation	138
12. Textures indicative of authigenic gold reprecipitation	142
– a discussion	
13. Summary and conclusions	145
